

Built environment curricula in the Asia-Pacific region: responding to climate change

RMIT - Prof. Dalton

How can ESD be integrated more systematically in the HEIs Built Environment (BE) professional education in the Asia Pacific region? The project looks at five case studies of BE professions from China, Thailand, the Philippines, Sri Lanka and Indonesia. They were currently preparing a workshop in Jakarta in August. Case studies will be completed with the final report end of 2016. There was also work in progress to develop BE curricula through the UN 10 YFP SBD programme.
